

2015 Mountain Horse SX Kit (Snow Cross)

The SX, or Snow Cross kit has been the test-bed for new technology, performance and durability; and Timbersled has put all all they have learned from the SX into the 2015 ST and LT kits. Because they have achieved such high performance levels and almost SX like suspension and handling traits with the 2015 ST kit; the 2015 SX will remain limited in production, with only 50 available.

*The SX will not receive all the upgrades of the 2015 ST/LT's, but will feature following changes:
Longer race tunnel with grab handle in a more convenient location - Narrowed ST powder track - Fox Float 3 track shocks - Timbersled Flex Arm - New ST/LT rear brake components - The rounded paddle "race version" track will also be available as a Snow Check option - Updated double bearing housings - The SX will still use the old style gas mounting system, old style chain case and cover, chassis angles and its ride height remains unchanged.*
