

## ***Zeagle Flathead LT Regulator***

*Its wide-open internal structure allows for direct and unrestricted airflow through the 1st stage, giving very low breathing resistance, even at great depths and high demands. Very low in profile, it barely extending above the tank valve, and places the low pressure hoses directly out to the sides. A conical precision high-pressure valve provides greater reliability than other conventional designs. The unique construction brings the weight down to two and a half pounds.*
