

Aqua Lung Apeks XTX 50 - Regulator

The XTX50 is for the discriminating diver who wants the benefits of a feature-rich regulator at a moderate price. This popular regulator has four medium-pressure ports all mounted on a rotating turret. This results in optimal hose routing while eliminating sharp bends in the hose.

Product Specifications

Four medium pressure ports mounted on a "rotating turret" 1st stage. (Rotating turret block allows the med-pressure ports to turn independent of main valve body). - Over-balanced 1st stage resulting in higher medium pressure. - Standard with environmental dry kit. Keeps water and contaminants from entering 1st stage and helps prevent freeze up. - Pneumatically balanced 2nd stage has diver-adjustable controls for both opening effort and venturi. Easy-grip opening effort control knob. - Features Diver Changeable Exhaust (DCE) system. Ability to change from larger to smaller exhaust tree. (Both sets included with regulator).
